Probably, following file from nethserver-base can be safely removed:

- /etc/e-smith/templates/usr/lib/neth-privacy/userInChageWarning.tmpl

Packages in nethserver-testing:

- nethserver-base-2.2.1-60.0git4b6541f8.ns6.noarch.rpm
- nethserver-lib-2.0.3-2.0gitb1246a75.ns6.noarch.rpm

### Test case

- Check console and bootstrap-console have been deleted
- Check that all modules using l18n library still correctly work. For example: nethserver-backup-data module should not raise any error when launching a new backup.

**#9 - 07/01/2014 10:28 AM - Alessandro Polidori**

- Assignee set to Alessandro Polidori

**#10 - 07/04/2014 09:32 AM - Alessandro Polidori**

- Status changed from ON\_QA to VERIFIED

- Assignee deleted (Alessandro Polidori)

- % Done changed from 70 to 90

It works correctly.

Commands console and bootstrap-console are not present.

I have installed nethserver-backup-data, I have configured a backup with the gui and no errors has been generated in log files for the I18n library when the backup has been executed.
