NethForge - Feature #2943
a new contrib Nethserver-wordpress

11/01/2014 12:06 PM - stephane de Labrusse

Status:	CLOSED		**Start date:**	
Priority:	Normal		**Due date:**	
Assignee:			**% Done:**	100%
Category:	nethserver-wordpress			
Target version:	nf-closed			
Resolution:			**NEEDINFO:**	No

Description

As said previously I worked on nethserver-wordpress : https://github.com/stephdl/nethserver-wordpress

The contrib could be build and tested, workable here

I have had an issue when i wanted to create the wiki page. I have this error

http://dev.nethserver.org/projects/nethforge/wiki/Nethserver-wordpress
----
Internal error

An error occurred on the page you were trying to access.
If you continue to experience problems please contact your Redmine administrator for assistance.

If you are the Redmine administrator, check your log files for details about the error.

In nethforge-testing:

  - nethserver-wordpress-1.0.0-1.0gitb09fb1ad.ns6.noarch.rpm:

#6 - 11/10/2014 05:06 AM - stephane de Labrusse

Test of the package nethserver-wordpress

-Installation

    yum install --enablerepo=nethforge-testing,epel nethserver-wordpress

I ought to take dependencies in epel
 perl-Expect
 php-IDNA_Convert
 php-PHPMailer
 php-simplepie
 wordpress

But since there is a lot and often upgrade of packages in epel, we can/could let this as is and write the need of epel in the wiki -------> Thoughts ?

see db

    config show wordpress

     wordpress=configuration

       MaxExecutionTime=60

       MemoryLimit=128M

       PostMaxSize=32M

       UploadMaxSize=8M

       WebFilesMod=enabled

       access=public

      status=enabled

-usage

  - After the installation the contrib is reachable at https://url:/wordpress   the redirection to https is a mandatory

  - I can change the default /wordpress

     config setprop wordpress URL Plop

     signal-event nethserver-wordpress-update

     after that the wordpress is reachable at https://url/Plop & https://url/wordpress

    Alias /Plop /usr/share/wordpress

    Alias /wordpress /usr/share/wordpress

  - if use the Salt property i can force all users to do an authentication after each nethserver-wordpress-update

```
     config setprop wordpress Salt enabled
     signal-event nethserver-wordpress-update
  - I can upload pictures and use them in an article the tmp folder is /usr/share/wordpress/tmp/
  - I can active the debug mode
     config setprop wordpress Debug enabled
     signal-event nethserver-wordpress-update
define('WP_DEBUG', true);

  - I can enable an automatic updater for plugins or themes
     config setprop wordpress AutomaticUpdater enabled
     signal-event nethserver-wordpress-update
define('AUTOMATIC_UPDATER_DISABLED', false);

  - I can change default value in db
config setprop wordpress MaxExecutionTime 120 MemoryLimit 256M PostMaxSize 64M UploadMaxSize 16M
     signal-event nethserver-wordpress-update

php_admin_value post_max_size 64M
     php_admin_value upload_max_filesize 16M
     php_admin_value memory_limit 256M
     php_admin_value max_execution_time 120

  - No errors in logs (messages & httpd/errors_log)
```

-conclusion

Ready for release

#7 - 02/20/2015 06:04 PM - Matteo Mengoni

- Assignee set to Matteo Mengoni

#8 - 02/20/2015 06:05 PM - Matteo Mengoni

- Status changed from ON_QA to VERIFIED

- % Done changed from 70 to 90

#9 - 02/21/2015 10:48 AM - stephane de Labrusse

cool :)

what need to be added ?????

#10 - 02/24/2015 09:53 AM - Davide Principi

- Status changed from VERIFIED to CLOSED

- Assignee deleted (Matteo Mengoni)

- % Done changed from 90 to 100

In nethforge 6.6 6.5:

nethserver-wordpress-1.0.0-2.ns6.noarch.rpm

Added pull request to package maintainer:

https://github.com/stephdl/nethserver-wordpress/pull/1
